Investing in start-ups and early-stage companies involves risks, including illiquidity, lack of dividends, loss of investment and dilution. It should be done only as part of a diversified portfolio. There is no assurance that the investment objectives of any investment opportunity will be achieved or that the strategies and methods described by the product will be successful. Past performance is not necessarily a guide to future performance and the value of an investment may go down as well as up.

Tax reliefs available on these investments depend on individual circumstances. Tax treatment is assumed as per current legislation and interpretation, which may change in the future. Tax reliefs also depend on the portfolio companies maintaining qualifying status, which is not guaranteed.

The investments discussed are not suitable for everyone. This document does not constitute advice on investments, legal matters, taxation or any other matters. Any recommendation should be based on a holistic review of a client's financial situation, objectives and needs.
